

The Pitch Hopper

Steep Pitch Side

The Pitch Hopper provides a level working surface on any pitch up to a 12/12. The steeper pitched side allows for a perfectly flat surface on a 12/12, but can be used on any pitch all the way down to a 9/12.

Lower Pitch Side

If you flip your Pitch Hopper around you will find the lower pitched side, which is designed to give a perfectly flat surface on a 9/12 pitch. This side can be used on any pitch below a 9/12 and provides the same great benefits on those roofs that are just too steep to walk.

Easy Grip Handles

Just grab your Pitch Hopper and go with effortless hand placement. Each Pitch Hopper has matching grab areas on either side. Moving your lightweight yet highly-durable wedge around the roof is easy. Our roof assistance tool weighs less than 7lb for the 32 Inch, and less than 6lbs for the 24 Inch.

Friction Force Foam

We make a uniquely blended foam and bind it to the wedge. The foam bottom creates a bond with asphalt shingles when weight and friction are applied. Each Pitch Hopper is rated to hold up to 250lbs. Please

always wear certified safety harness while using our product.
