

# HERITAGE PANEL

ROOFING

Black  
Cover: Textured Black

The classic look similar to standing seam with the convenience of an exposed fastener roof.

# WEATHERXL PANEL

## 6 LAYERS OF PROTECTION

## Standard AZ50 Galvalume

The economically priced Galvalume has a proven track record. It is made from bare steel covered with a mixture of zinc, aluminum, and trace amounts of silicone to improve its long-term weathering capabilities.

## Not Recommended for Open-faced Animal Confinement

Galvalume does not perform well in direct contact with ammonia vapors from animal confinement. The life of the panel can be extended by the use of a vapor barrier like double bubble or by a solid roof deck.

## Weather XL™ Paint System

Weather XL™ is a silicone-modified polyester (SMP) paint system from Sherwin-Williams that provides strong resistance to scratching, chalking, fading, and weathering.

The Standard Heritage Panel is available in 25 high-performance colors - 11 of which are available in 26 gauge.

## Heavy Gauge Steel Means Better Durability

The Heritage Panel has a minimum bare steel thickness (before paint) of 0.019" which is classified as 26 gauge.

Textured Black

**The Textured WeatherXL Heritage Panel is a popular choice for roofing and siding thanks to its glare resistance.**

# TEXTURED WEATHERXL PANEL

## 6 LAYERS OF PROTECTION

## Standard AZ50 Galvalume

Homeowners like the Textured Heritage Panel because the unique textured surface redirects sunlight, causing less glare than smooth panels, and reduces oil canning. Contractors like it because the texture provides more grip during installation than smooth panels.

## Not Recommended for Open-faced Animal Confinement

Galvalume does not perform well in direct contact with ammonia vapors from animal confinement. The life of the panel can be extended by the use of a vapor barrier like double bubble or by a solid roof deck.

## Weather XL™ Paint System

The Textured Weather XL™ is a silicone-modified polyester (SMP) paint system from Sherwin-Williams that provides strong resistance to scratching, chalking, fading, and weathering. The Textured Heritage Panel is available in 9 high-performance colors.

## Heavy Gauge Steel Means Better Durability

The Heritage Panel has a minimum bare steel thickness (before paint) of 0.019" which is classified as 26 gauge.

# COMMON APPLICATIONS

## RESIDENTIAL

Whether you need a metal roof for your home, or roofing and siding for your garage, the Heritage Panel is competitively priced with shingles, but with a longer life expectancy. In contrast to the 15-20 year lifespan of shingles, the Heritage Panel has a 40 year warranty on its paint alone. Plus, it is available in over 30 energy-efficient colors that can save on your energy bills.

## COMMERCIAL

With your place of business, the roof or siding needs to serve two main purposes. First, it needs to be functional and durable because the longer it does its job without maintenance, the more profit stays in your business. Second, it should look attractive and show your customers that you care about the details. Your commercial facility will look sharp for years to come when you choose the Heritage Panel.

## AGRICULTURAL

Metal roofing has been trusted on farms across the country for over a century, and it's easy to see why. Its ease of installation and long lifespan make the Heritage Panel a smart choice for storage buildings, machinery sheds, workshops, and other agricultural structures where strength and reliability matter most.

# COMMON INSTALLATIONS

SEE INSTALLATION GUIDE FOR MORE DETAILS

## OPEN-FRAMED

When installing the Heritage Panel on an open-framed building – a common technique with pole barns – screw the panel into the 2x4 purlins spaced every 2 feet across the trusses.

A vapor barrier such as Double Bubble, Felt, or Synthetic Felt Underlayment is recommended to prevent condensation. A vapor barrier can also help protect the panels from ammonia vapors caused by animal confinement.

## OVER ASPHALT SHINGLES

If approved by local building codes, the Heritage Panel may be installed over the existing shingle roof. Rather than laying the panel directly on the shingles, purlins that are fastened through the shingles into the rafters/trusses should be used. This is to keep the abrasive surface of the shingles from wearing through the primed underside of the Heritage Panel as the metal expands and contracts with changes in temperature.

A vapor barrier such as Double Bubble, Felt, or Synthetic Felt Underlayment is recommended to prevent condensation.

## OVER SHEETING

Special fasteners may be required when installing the Heritage Panel on a plywood or OSB roof deck based on sheathing thickness. The screws should be allowed to penetrate the sheathing, but screw spacing requirements will vary depending on the thickness, type of sheathing, and uplift requirements.

A vapor barrier such as Double Bubble, Felt, or Synthetic Felt Underlayment is recommended to prevent condensation.

# MEET THE HERITAGE PANEL

**Pair With Performance:** Use Lifetime Warranty ST Fastener ZXL screws for a complete, long-lasting roof system.

# A LEADER IN ENERGY-EFFICIENCY

## ENJOY THE COMFORTS OF A METAL ROOF YEAR-ROUND

Both metal and asphalt roofing get the job done when it comes to sheltering a building, but they really part ways when it comes to durability, energy efficiency, and cost.

If you didn't notice, it was hot this summer. And if you have ever been in an attic or crawl space in the middle of a summer day, you know what it feels like to be in an oven. The sun is beating down with all its force onto your asphalt shingle roof. Some of the heat is reflected, but the rest is absorbed through the roof into the air space and building below.

The nature of the materials used, with even the lightest color asphalt shingles, results in only about 22% of the sun's heat being reflected.<sup>1</sup>

That means 78% of the heat is being absorbed into the building below and your air conditioning system has to work extra hard to cool off the building and keep you comfortable. You can see how hard your system is working by looking at your energy bill. Nobody likes to see their electric bill spike in the summer.

Did you know that choosing a metal roof can save you money?

### MEET THE HERITAGE PANEL.

Embrace the elegance of yesterday with the enduring quality of tomorrow. Heritage Panel's painted steel finish reflects up to 80% of direct sunlight, depending on color, helping reduce heat buildup and improve energy efficiency compared to shingles.

Faster and easier to install than standing seam, this screw-down metal panel delivers a classic, affordable look without sacrificing performance. With durable, fade-resistant coatings and simple installation, the Heritage Panel is a smart, long-lasting choice for both timeless style and modern comfort.

Metal roofs can be about 100 degrees cooler on the surface than traditional asphalt roofs.<sup>2</sup> Plus, the Heritage Panel comes with a 40-year warranty, so you can enjoy your energy savings for a long time to come.

# 3 WAYS TO CHOOSE YOUR COLORS

## COLOR SAMPLES - MOST ACCURATE

The best way to accurately choose the colors for your new roof or wall panel is take one of our free metal samples along home.

Though the reflectivity of the paint is great for energy-efficiency, it also means the color is going to look slightly different at different times of the day. So it is a good idea to test the colors in different lighting.

## COLOR CHART - MOST POPULAR

Using one of our free color charts is the next best option and the most popular option for choosing colors.

We go to great lengths to ensure color accuracy, and it is a great way to compare colors side-by-side, but the painted panels will have unique characteristics that cannot be duplicated perfectly with ink on a page.

## ONLINE POLE BARN COLOR VISUALIZER

The online color visualizer is a fun way to experiment with different colors on a photo of a real building. It is truly unique in that you can choose unlimited color combinations for the roof, siding, trim, and wainscoting.

But because of the limitations of the visualizer and the variations in color renditions on digital screens, the accuracy of the colors is not guaranteed. Once you have narrowed your selection, request free metal samples to finalize your selection.

**Scan the code to use the visualizer.**

# THE ADVANTAGES

TO METAL ROOFING PANELS

## LONGEVITY

Compared to asphalt shingles, which are often made from toxic materials and discarded in landfills after just 20 years, a steel roof stands apart. Made from recycled materials and fully recyclable at the end of its long, useful life, steel roofing isn't just built to last. It's the responsible choice.

## ENERGY EFFICIENCY

One of the great advantages of steel roofing is its ability to block radiant heat.

While asphalt shingles absorb radiant heat, the physical properties of steel cause the radiant heat from outside (during the summer), or inside (during the winter) to bounce off steel roof panels. Meaning, your AC doesn't have to work as hard when the heat is trying to get in, and your heating system doesn't have to work as hard when the heat is trying to escape.

## DURABILITY

Steel is by nature a hard substance, and steel roofing is actually the recommended roofing material in hail-prone areas because of its impact-resistance, as well as in hurricane zones because of its wind-resistance, and in areas subject to forest fires because of its fire-resistance.

## AESTHETICS

Other advantages of steel roof panels include their clean, architectural look and vibrant colors. For these reasons, steel roofs are growing in popularity among homeowners. (They like the unique look that can be modern or classic.)

## ENVIRONMENTAL FRIENDLINESS

It's almost not worth saying after talking about a steel roof that lasts for more than a lifetime, but, in contrast to other roofing products like asphalt shingles made from toxic materials that usually can't be re-purposed and are dumped into a landfill after only 20 years of service, a steel roof that's made from recycled material and is 100% recyclable after a long and useful life does seem like the more responsible choice.
